DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because some of the current drawings are hand-drawn and hand-labeled. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-80 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 40-42 of copending Application No. 11/090898. Although the conflicting claims are not identical, they are not patentably distinct from each other because the '898 application claims (see claim 40): a spatially distributed multimode optical fiber ("spatially distributed multimode optical fiber"); a pixilated photodetector ("pixilated photodetector"); a wireless transmitter and receiver ("transmitting from a wireless... receiving... at a wireless receiver"); higher-order-to-lower-order coupled light ("modal conversion"); and an inner radius of an annulus ("predetermined central area").

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

5. Claims 1-80 would be allowed once the double patenting rejection is overcome.

6. The following is a statement of reasons for the indication of allowable subject matter: A system and method as claimed, more specifically in combination with automatically interpreting the detected variables as higher-order-to-lower-order coupled light when the light is incident only within a circular area of the pixilated photodetector defined by an inner radius of an annulus created by higher order modes of light, is not disclosed or made obvious by the prior art of record.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sardana et al. (U.S. Patent 6,590,194) disclose a pixilated detector for measuring perturbations.
